

How to Install SimpleRisk Appliance (VMWare)

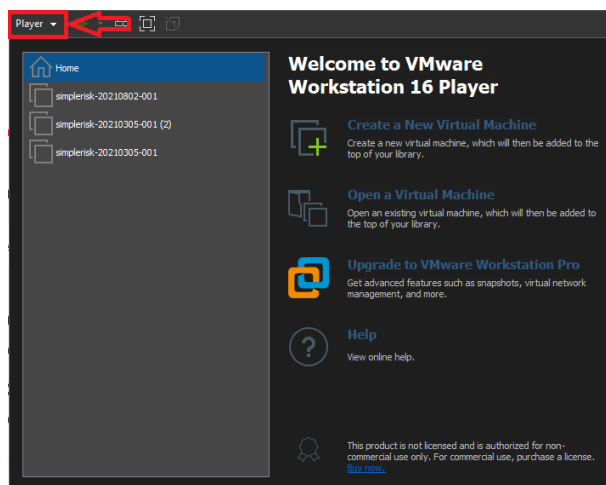

Introduction

This guide will cover the steps to import the SimpleRisk VMWare appliance. This guide assumes you already have VM Workstation Player installed. This guide was created using VM Workstation Player 16. The instructions should stay relatively the same between versions however if you run into any issues please contact us at support@simplerisk.com.

Instruction

Step 1: After downloading the SimpleRisk VMWare appliance from <https://www.simplerisk.com/download> extract the contents of the downloaded zip where you would like to store the VM.

Step 2: Open VMWare Work Station Player and click “Player” at the top left. Under “File” click “Open”. Navigate to the OVF file for SimpleRisk and open it. In my example I’m using “simplerisk-20211010-001.ovf”.

Step 3: You will now be able to name the Virtual Machine and select where it will be stored. Once you have made any changes necessary click “Import”.

Step 4: Double click the new Virtual Machine we just created for SimpleRisk in the left hand side of the Workstation Player window. Once the machine boots you will enter the login information below.

Login: simplerisk

Password: simplerisk

Step 5: Now that the server is up and running use the command “ip addr show” to determine the IP address. Please use the screenshot below to help guide you to which IP you need. This value will almost certainly be different from the example.

```
simplerisk@simplerisk:~$ ip addr show
1: lo: <LOOPBACK,UP,LOWER_UP> mtu 65536 qdisc noqueue state UNKNOWN group default qlen 1000
    link/loopback 00:00:00:00:00:00 brd 00:00:00:00:00:00
    inet 127.0.0.1/8 scope host lo
        valid_lft forever preferred_lft forever
    inet6 ::1/128 scope host
        valid_lft forever preferred_lft forever
2: eth0: <BROADCAST,MULTICAST,UP,LOWER_UP> mtu 1500 qdisc fq_codel state UP group default qlen 1000
    link/ether 00:0c:29:19:6b:11 brd ff:ff:ff:ff:ff:ff
    inet 192.168.174.128/24 brd 192.168.174.255 scope global dynamic eth0
        valid_lft 1780sec preferred_lft 1780sec
    inet6 fe80::20c:29ff:fe19:6b11/64 scope link
        valid_lft forever preferred_lft forever
simplerisk@simplerisk:~$
```

Step 6: In the browser on the host system or any system on the same local network type the IP of your SimpleRisk server into your browser URL and hit enter.

At this point you should now be at the login screen of your new SimpleRisk installation. The default login and password are stated below:

Login: admin

Password: admin

SimpleRisk

Summary

These instructions should have allowed you to install and begin to use SimpleRisk. If you have ran into any issue or have questions please contact us at support@simplerisk.com.
